

*Sub B<sup>1</sup>*  
 1 11. (Amended) A document containing non-identifying and identifying information,  
 2 said document comprising:

3 first printed matter rendered at a first location on said document and at a first  
 4 scale enabling said first printed matter to be resolved by a viewing person without  
 5 magnification;

6 second printed matter representing said first printed matter rendered at a second  
 7 location on said document and at a second scale, said second scale being significantly  
 8 smaller than said first scale, said second location spaced from said first location whereby  
 9 said first and second printed matter is printed in at least two separate and distinct  
 10 locations on said document;

11 wherein said second printed matter cannot be clearly resolved by a viewing  
 12 person without magnification of the second printed matter; and

13 wherein said first and second printed matter conveys identifying information.

*Sub B<sup>2</sup>*  
 1 11. (Amended) A system of tamper resistant identification documents comprising:  
 2 a plurality of identification documents, each of said documents displaying  
 3 information specific to a particular person;

4 each of said documents comprising first printed matter rendered at a first location  
 5 on said documents at a first scale enabling said first printed matter to be resolved by a  
 6 viewing person without magnification; and second printed matter representing said first  
 7 printed matter at a second location on said documents and at a second scale, said second  
 8 scale being significantly smaller than said first scale, said second location on each card  
 9 being spaced from said first location on each card whereby said printed matter is  
 10 represented in at least two separate and distinct locations on each said card, wherein said  
 11 second printed matter cannot be resolved by a viewing person without magnification of  
 12 the second printed matter, and wherein said first printed matter of each card is specific to  
 13 the particular person identified in each card.

*Sub B<sup>3</sup>*  
 1 21. (Amended) A method of printing a document containing identifying information for  
 2 a particular person comprising:  
 3 providing a base card;

4 printing information which is specific to the particular person identified on said  
5 base card at a first location and at a first scale enabling said printed information to be  
6 resolved by a viewing person without magnification; and  
7 representing said information on said base card at a second location and at a  
8 second scale, said second scale being significantly smaller than said first scale, said  
9 second location spaced from said first location whereby said information is represented  
10 in at least two separate and distinct locations on said base card, and wherein said  
11 information represented at said second location is represented at a second scale which  
12 requires the information to be magnified for a viewing person to clearly resolve the  
13 information represented at said second location.

## REMARKS

The Applicants appreciate the Examiner's examination of the subject Application and request that reexamination of the claims and reconsideration of the Application be made in view of the preceding amendments and the following remarks:

The specification was amended to disclose Figures 1A, 1B, 1C, and 1D as required by the Examiner.

The Examiner has rejected claims 1, 3, 6, 13, 21, and 23 under 35 U.S.C. §102(b) as being anticipated by Craven et al. (U.S. Patent 5,157,424).

Craven et al. disclose a method and apparatus for manufacturing tamper-resistant identification cards containing a duplicate digitized signature superimposed over a digitized image. Although size of the image presented by the data can be reduced "so that it will fit within the confines of the portrait" (column 4 lines 1-3), Craven et al. do not require the use of magnification. Craven et al. provide "identical reproductions of the same signature at two different locations on the license, any authority to whom the license is presented can readily determine whether the photograph is the one that properly belongs to the license." (Column 3, lines 4-8)
